---

Hi Gary,

In the attached map, I included only those potentially deficient areas (points) that fell within the Cap Boundary.

The distances were determined by straight line measurements from each point to the barrier float line using an ArcGIS measurement application.

Please let me know if you have questions or need any changes!

Melody

Thanks Brandi; as we discussed, the plan for the buoys is attached. The buoy installation will be completed this week & I will forward some pics when I get them, either today or Thursday. Also, once the buoys are installed the actual GPS locations will be recorded.

Melody – please superimpose the planned buoy line location (p. 4 of the Buoy Enhancement Letter) with the potentially deficient areas (yellow dots) that are only located within the footprint of the cap – the goal is to see how close are the potentially deficient areas to the planned buoy line.

Thanks,

Gary Miller

We are still planning on operations may 16-20 with a contingency thru the weekend. As you requested, we will start with sampler installation and then continue with the cap survey

OK – Gary, can you provide an update on EPA’s schedule for the cap inspection and pore water sampler installation?

Also need to bug you about the schedule next week.

I’ve been holding Tuesday and Wednesday open and need to be back home Thursday so I can make my son’s college graduation on Friday.

Will confirm removal with Billy when he calls me back. They were removing them as they progressed last Thursday. I think we only lost 2 downstream during the heavy rains and flows.

Yes Gary – I believe so.

Wendell – Can you confirm the temporary buoys have been removed at this point?  
Also, please ask Daskocil to provide some photos.

Thanks,  
David

OK, thanks David; have they already picked up the temporary buoys?

**Subject:** San Jacinto Buoy update

Just talked with Billy at Dorskocil. They are making good progress and should finish tomorrow on the initial installation.

Winds on Friday slowed installation, they were getting beat up pretty bad and stopped early. Winds out of the north and slightly higher than normal (2.5 ft) tides are speeding up installation today.

He will be monitoring the buoys and barrier over the next week or so and adjust the anchor cable lengths as needed to keep them on station.
